

100-acre Farm

100-acre Farm's soil is Robertson Shale with a 4.4 pH which is quite acid and good for certain plants.

We use 2 types of bees:

- Italian - calmer tough consistent bee, pulls honey early, then more laid back late summer/early fall. Most common bee for keepers.
- Russian - slow to start bee and smaller. Pulls honey well into the fall. Consistent and aggressive once it starts.
